

ALEJANDRO TEJERO DE LA MORENA

Telematics Engineering

Madrid, Spain | 620 62 13 84 | atejerodelamorena@gmail.com | [Portfolio](#) | [Linkedin](#) | [Github](#)

PROFESSIONAL PROFILE

Bachelor's graduate in Telecommunications Engineering, specializing in Telematics. Organized, responsible, and consistent, fully committed to every task and focused on doing things well. I enjoy understanding what I do and paying attention to detail. I am looking to grow professionally in software, cloud, automation and cybersecurity.

EDUCATION

Telematics Engineering - Universidad Rey Juan Carlos

September 2021 – May 2026

WORK EXPERIENCE

Engineering Internship - Robert Bosch Spain S.L.U.

May 2026 – August 2026

- Analysis of large volumes of production data to identify patterns and propose process improvements.
- Design of tables, relationships, queries, and data cleaning for production databases.
- Development of dashboards and reporting in Excel and Power BI for production KPI tracking.
- Management and creation of SAP records in support of the team's processes.

Additional Experience (combined with studies)

January 2022 – September 2025

- Lifeguard at aquatic facilities, event steward, sales promoter, and catering assistant – Delfinia Ibérica Mantenimiento SL, Cater Line SL, Staff Global.

TECHNICAL SKILLS

Programming languages: Python · C · C++ · SQL · JavaScript · Shell scripting · Go · Pascal

Backend: Django · REST APIs

Databases: PostgreSQL · MySQL

Networking: TCP/IP · IPv4/IPv6 · OSPF · HTTP/HTTPS · SSH · Wireshark · NetGUI

Systems: Windows · Linux · Virtualization

Tools: Git (branches, commits, pull requests) · GitHub · GitLab · VSCode · PyCharm · Microsoft 365 · SAP

Languages: Spanish (native) · English (B1, preparing for B2)

ACADEMIC PROJECTS

WebBuilder TFG - Django · PostgreSQL · Docker · n8n · LLMs · OAuth

[GitHub](#) - [Website](#)

- Platform that converts any public API (JSON/XML/CSV) into a complete and deployable Django project. An LLM analyzes the dataset, proposes the data schema, and generates the code.
- Includes authentication (Google/GitHub), a code editor with AI-assisted refinement, versioning of generated sites, and automated deployment (n8n + Docker) with container monitoring.
- Grade: 9.9 – nominated for Honors. Speaker at the 1st Conference on Free Software and AI, presenting the project's architecture and the workings of Generative AI - URJC.

GameRank - Django · HTMX · REST APIs · XML/JSON

[GitHub](#)

- Video game catalog and ranking platform aggregating data from multiple sources (XML + REST APIs), featuring ratings, comments, a like/dislike system, and user game tracking.
- Dynamic comment loading with HTMX. Grade: Honors 9.9

Greenhouse simulator - C++ · OOP · Data Persistence

[GitHub](#)

- Greenhouse simulator with sensors (temperature, humidity, light), a terminal-based interface, and a user login system. Data persisted in files. Project documented with Doxygen.

Tactical Battle - Python · TCP Sockets · Client-Server

[GitHub](#)

- Turn-based tactical combat simulator with a client-server architecture. The server manages the matchmaking lobby, simultaneous matches, and rankings.
